JOURNAL OF SOVIET MATHEMATICS

Volume 5, Numbers 1-6

Volume 5, Number 1 January, 1976

	Engl./Russ.	
Theory of Summability of Sequences and Series—G. P. Kangro	1	5
Introduction	1	5
1. Methods of Summation	1	6
2. General Structure of Summability Fields	5	11
3. Direct Theorems	8	17
4. Inverse Theorems	13	25
Literature Cited	18	33
Linear Systems of Ordinary Differential Equations—N. A. Izobov	46	71
1. Definition and Basic Properties of Different Exponents	46	71
2. Reducible and Almost Reducible Systems	47	74
3. Regular Systems	49	77
4. Absolutely Regular Systems	50	79
5. Irregularity Coefficients	52	80
6. Linear Systems with Almost Periodic Coefficients	53	82
7. Stability of Exponents and Integral Separability of Solutions	55	86
8. Uniformly Coarse Sequences of Periodic Systems	57	89
9. Central Exponents and Their Reachability	57	89
10. Limits on Exponents of Linear Systems	58	92
11. Metric Theory of Linear Systems	60	93
12. Asymptotically Equivalent Systems	60	95
13. Linear Approximation Stability	61	96
14. Extended Lyapunov Characteristic Numbers	62	98
15. Other Problems	63	99
Literature Cited	64	100
Minimization Methods with Constraints—B. T. Polyak	97	147
1. Introduction	97	147
2. Elementary Minimization Problems	99	150
3. Minimization on Simple Sets	100	153
4. Problems with Equality-Type Constraints	102	155
5. Problems with Linear Constraints	104	160
6. Convex Programming Problems	106	163
7. General Mathematical Programming Problems	108	168
8. General Schemes for Proving Convergence	111	172
9. Transformations of Problems and Methods of Approximation	111	172
10. Special Mathematical Programming Problems	112	174
11. Related Problems	115	178
12. Applications, Programs, Computational Work	116	181
Literature Cited	117	183

Volume 5, Number 2 February, 1976

Invariant Subspaces in the Theory of Operators and Theory of Functions —N. K. Nikol'skii	129	199
1. Existence of Invariant Subspaces	130	202
2. Lattices of Invariant Subspaces and Operator Algebras	138	218
3. Triangulation and Quasi-Triangulation in Chains of Invariant Subspaces	141	223
4. Cellular Operators	145	230
5. Spectral Operators, Decomposable Operators, and Related Questions	150	240
6. The Problem of Spectral Synthesis. Abstract Operators	158	257
7. Isometric Shift and Inner Functions	164	267
8. Shift Universality. Functional Model and Characteristic Function	166	273
9. Generalization of Beurling Theorem. Dirichlet Algebras. Translation-Invariant Subspaces	177	294
10. Approximative Meaning of Invariant Subspace Theorems	186	312
11. Problem of Spectral Synthesis. Groups of Shifts, Approximation by Exponents, Spectral Function Theory	191	323
12. Problem of Spectral Synthesis. Semigroups of Shifts, Polynomial Approximation, Corona Theorems	200	341
13. Ideals in Spaces and Algebras of Analytic Functions Smooth to the Boundary	206	354
Literature Cited	209	360
Non-Self-Adjoint Operator Algebras in Hilbert Spaces—M. A. Naimark, A. I. Loginov, and V. S. Shul'man	250	413
1. Introduction	250	413
2. Invariant Subspaces	250	414
3. Reflexive Algebras	255	423
4. Reflexive and Transitive Lattices	258	429
5. Triangular and Nest Algebras	259	432
6. Subdiagonal Algebras and Analytic Functions	262	437
7. Subalgebras of C^*-Algebras	264	441
8. J-Symmetric Algebras	269	452
9. Some Unsolved Problems	271	456
Literature Cited	272	456

Volume 5, Number 3 March, 1976

Yu. I. Manin. p-Adic Automorphic Functions	279	5
Introduction	279	5
Chapter 1. Jacobi—Tate Functions	280	7
1. Fundamental Conventions	280	7
2. p-adic Laurent Series	280	8
3. Jacobi—Tate Functions	285	15
Chapter 2. Abelian Functions	288	19
1. Laurent Series of Several Variables	288	19
2. Periods, Polarization, Theta Functions	289	22
3. Field of Abelian Functions	293	27
Chapter 3. Schottky Groups and Functions	295	31
1. Schottky Groups	295	31
2. Divisors and Automorphic Functions	299	37
3. Analytic Jacobian of Schottky Group	305	46
4. Tree of Group PGL(2)	308	49
5. Coordinates, Circles, Cross-Ratios	311	55
6. Operation of Schottky Group on a Tree	313	59
7. Polarization of the Analytic Jacobian of the Schottky Group	318	69
8. Mumford Schemes	320	72
9. Construction of Formal Factors	323	76

	Engl.	Russ.
Chapter 4. p-Adic Analytic Spaces and Formal Schemes	325	80
1. Affinoid Spaces	325	80
2. Analytic Spaces	328	84
3. Relation to Formal Schemes	330	86
4. Algebraization of Analytic Objects	331	88
Literature Cited	332	91
L. D. Faddeev. Inverse Problem of Quantum Scattering Theory. II	334	93
Introduction	334	93
Chapter 1. One-Dimensional Schröedinger Operator	341	105
1. Fundamental System of Solutions of Schröedinger Equation	342	105
2. Scattering Theory	347	112
3. Volterra Transformation Operators	352	119
4. Gel'fand–Levitan Equations	355	122
5. Investigation of Inverse Problem	357	126
6. Particular Cases of the Solution of the Inverse Problem	364	134
Chapter 2. Simple Generalizations and Applications	367	139
1. Potentials with Distinct Asymptotics at Infinity	367	139
2. Canonical System	371	144
3. Trace Formula	373	147
4. Nonlinear Evolutionary Equations	376	151
Chapter 3. Three-Dimensional Schröedinger Operator	379	156
1. Scattering Theory	380	157
2. Researches on Volterra Transformation Operators	383	161
3. Normalizing Factors for the Solution $u_\gamma(x, k)$	386	165
4. Differential Equations with Respect to the Parameter γ	388	168
5. Investigation of Inverse Problem	391	173
Literature Cited	395	178
Yu. A. Rozanov. Innovative Processes and the Factorization Problem	397	181
Chapter 1. General Concepts and Several Examples	397	181
1. Fundamental Problem of the Theory of Innovative Processes	397	181
2. Regular Processes and Factorization Problem	402	188
Chapter 2. Regular Stationary Processes	408	197
1. Structural Type of Regular Stationary Process	408	197
2. Wold Representation and the Factorization of the Spectral Density	410	201
3. Multiplicity of a Regular Stationary Process	415	207
4. Several Regularity Conditions	417	210
Chapter 3. Equivalent Random Processes	426	223
1. The Concept of Equivalence. Probabilitic Interpretation for the Case of Gaussian Distributions	426	223
2. Equivalence of Stationary Processes	433	233
3. Random Processes Equivalent to the Wiener Process	445	249
Literature Cited	449	254

Volume 5, Number 4 April, 1976

THE PROBLEM OF THE CONTINUUM		
Yu. I. Manin		
Introduction	451	5
1. Problem, Results, Concepts	452	7
2. Formal Languages	455	12
3. Language of the Theory of Real Numbers	459	17
4. Boolean Truth Function	460	19
5. Nondeducibility of the Continuum Hypothesis in L_2 Real	462	21
6. Informal Set Theory. Ordinal Numbers and von Neumann Universe	467	28

	Engl./Russ.	
7. Formal Language and Zermelo–Fraenkel Axioms	471	34
8. Models. Constructive Gödel Universe and Consistency of the Continuum Hypothesis	475	39
9. Universe over Boolean Algebra	481	47
10. The Axiom of Extensionality is "True"	485	52
11. The Axioms of Pairs, Sum Set, Power Set, and Regularity Are "True"	487	55
12. The Axioms of Infinity, Substitution, and Choice Are "True"	491	60
13. The Continuum Hypothesis is "False" for Appropriate B	497	67
Literature Cited	501	72

SERIES IN FABER POLYNOMIALS AND GENERALIZATIONS
P. K. Suetin

1. Asymptotic Properties of Faber Polynomials	503	74
2. Representation of Analytic Functions by Faber Series within a Region	506	78
3. Convergence Conditions on Series in Faber Polynomials	512	86
4. Boundary Properties of Series in Faber Polynomials	514	89
5. Results of S. Ya. Al'per on Convergence of Faber Series in a Closed Region	515	92
6. V. K. Dzyadyk Summation Formula and S. M. Nikol'skii Problem in a Complex Region	518	95
7. Convergence of Generalized Faber Series in a Closed Region	521	100
8. Extension of a Stechkin Power Series Theorem to Faber Series	526	106
9. Faber–Walsh Polynomials	528	110
10. Faber–Laurent Series	531	113
11. Rational Faber–Dzhrbashyan Functions	532	115
12. Faber–Erokhin Basis Systems	538	122
13. Faber Polynomials in the Theory of Univalent Functions	543	130
14. Various Auxiliary Problems	546	134
Literature Cited	549	138

APPLICATIONS OF COMPLEX GERM THEORY TO EQUATIONS WITH A SMALL PARAMETER
S. Yu. Dobrokhotov and V. P. Maslov

Introduction	552	141
1. Hamilton–Jacobi Equations and Transfer Equations with Dissipation	553	143
2. Lagrangian Manifold with Complex Germ	556	147
3. Construction of the Solution of the Hamilton–Jacobi Equation with Dissipation	563	156
4. Transfer Equation	570	165
5. Eigenfunctions of the Laplace Operator Concentrated in a Neighborhood of a Closed Trajectory	575	172
6. Nonlinear Equations. Conditional Asymptotic Solutions	587	187
7. Nonlinear Equations. Examples	596	199
Literature Cited	605	211

Volume 5, Number 5 May, 1976

UNIFORM APPROXIMATIONS BY HOLOMORPHIC FUNCTIONS
A. G. Vitushkin

§1. Polynomial Convexity and Holomorphic Approximations	607	5
§2. Approximations in C^1	607	6
§3. Analytic Capacity of a Set	608	8
§4. Ratiinal Approximations in C^1	609	8
§5. Polynomially Convex Compacts in C^n	610	10
§6. Approximations on Arcs	610	11
§7. Approximations in C^n	611	11
Literature Cited	611	12

BOUNDARY PROPERTIES OF HOLOMORPHIC FUNCTIONS OF SEVERAL COMPLEX VARIABLES
G. M. Khenkin and E. M. Chirka
Chapter I. Extension from the Boundary 612 13
§1. Holomorphic Extendibility Criteria 612 13
§2. Local Extension from Manifolds 619 25
Chapter II. Existence of Limit Values 626 38
§1. Special Limit Values 626 38
§2. Generalizations of Fatou's Theorem 629 43
§3. Generalizations of Lindelöf's Theorem 633 51
Chapter III. Boundary Uniqueness Theorems 635 56
§1. Uniqueness Manifolds 635 56
§2. Peak Sets 640 65
§3. Edge-of-the-Wedge Theorem 643 71
Chapter IV. Boundary Properties of Proper Mappings 645 74
§1. Bounds for the Invariant Carathéodory Metric and Other Auxiliary Statements 645 75
§2. Fundamental Results 647 78
Chapter V. Boundary Properties of an Integral of the Cauchy-Leray Type in Strongly Pseudoconvex Domains 650 83
§1. Cauchy-Leray Formula for Strongly Pseudoconvex Domains 650 83
§2. Estimates of an Integral of the Cauchy-Leray Type in Strongly Pseudoconvex Domains 655 91
§3. Bergman Integral in Strongly Pseudoconvex Domains 659 98
Chapter VI. Orthogonal Measures and Uniform Approximation 660 99
§1. A-Measures and the Multidimensional Theorem of F. and M. Riesz 660 99
§2. Separation of the Singularities of Bounded Holomorphic Functions in Strongly Pseudoconvex Domains and Approximation Theorems 663 104
Chapter VII. Formulas and Uniform Bounds for the Solution of the ∂-Equation 670 117
§1. Survey of Results 670 117
§2. Some Proofs and Examples 674 123
Literature Cited 679 132

ASPECTS OF APPROXIMATION THEORY FOR FUNCTIONS OF ONE COMPLEX VARIABLE
M. S. Mel'nikov and S. O. Sinanyan
PART I. UNIFORM APPROXIMATIONS BY RATIONAL FUNCTIONS 688 143
Introduction 688 143
Chapter I. Analytic Capacity of a Set and Its Properties 689 144
§1. Analytic Capacity of a Set 689 144
§2. Connection of Analytic Capacity with Measures. Removable Singularities 690 147
§3. Estimates of a Function and of the Laurent Coefficients in Terms of Analytic Capacity 692 150
Chapter II. Separation of Singularities and Construction of Approximations 693 152
§4. Integral Representations and Partition of Unity 693 152
§5. Approximation of Functions 695 154
§6. Additivity of the Capacity under Special Partitionings of a Set 696 157
Chapter III. Estimate of the Integral 697 158
§7. Estimate of the Integral 697 158
§8. Semiadditivity of Analytic Capacity 701 164
Chapter IV. Uniform Approximations by Rational Functions 702 165
§ 9. Description of Functions Belonging to R(E) 702 166

Engl./Russ.

§10. Criterion for the Equality of Algebras R(E) and A(E) 703 168
§11. Geometric Conditions for the Equality of Algebras R(E) and A(E) 703 168
§12. Approximations on Nowhere Dense Sets 706 172

Chapter V. Approximations of Functions with a Hölder Condition 707 173
§13. Metric Properties of Analytic α-Capacity 707 173
§14. Approximation of Functions with a Hölder Condition 710 180

Chapter VI. Properties of Algebras R(E) and A(E) 713 184
§15. Peak Points 713 184
§16. Structure of Gleason Parts 716 188
§17. Point Derivation 718 193
§18. Pointwise Bounded Approximation 719 194

PART II. APPROXIMATIONS IN THE MEAN 720 195
Chapter I. Approximation by Polynomials in Areal Mean 720 195
Introduction 720 195
§1. Points of Bounded Values and Completeness of Polynomials 721 197
§2. Weighted Polynomial Approximations for Sets with Interior Points 729 211
§3. Cimpleteness of Polynomials in (Non-Carathéodory) Domains of "Crescent" Type 730 213

Chapter II. Approximation by Analytic Functions in the Mean 731 216
§4. Introduction 731 216
§5. Nonlinear Potential Theory 733 219
§6. Approximation in the Mean by Analytic Functions 739 229

Chapter III 742 234
§7. Invariant Subspaces, Points of Bounded Values, and Capacity 742 234

Chapter IV. Extension of the Uniqueness Property of Analytic Functions to Compacta without Interior Points 745 240
§8. General Remarks 745 240
§9. Goncharov's Example 746 242
Literature Cited 748 245

Volume 5, Number 6 June, 1976

ANALYTIC METHODS IN THE THEORY OF SYSTEMS OF DIOPHANTINE EQUATIONS AND INEQUALITIES WITH A LARGE NUMBER OF UNKNOWNS
A. V. Malyshev and E. V. Podsypanin
§1. Introduction 753 5
§2. Additive Diophantine Systems 757 10
§3. Birch's Theorem on a General System of Homogeneous Diophantine Equations of Odd Degrees 762 18
§4. General Homogeneous and Quasihomogeneous Diophantine Systems 763 19
§5. Inhomogeneous Diophantine Equations 769 28
§6. Diophantine Inequalities 772 33
§7. Fractional Parts of Systems of Polynomials in Several Variables 775 38
Literature Cited 777 40
Additional Literature Cited. Papers on the Waring Problem 783 47

ENDOMORPHISM RINGS OF MODULES AND LATTICES OF SUBMODULES
A. V. Mikhalev
Introduction 786 51
1. Endomorphism Rings of Various Classes of Modules 786 52
2. Ring Properties of Endomorphism Rings 789 56
3. Radicals of Endomorphism Rings of Modules 791 59
4. Endomorphism Rings and the Decompositions of Modules into Direct Sums 791 60

5. Description of Endomorphism Rings, Determinability of Modules from Their Endomorphism Rings. 792 61
6. Rings of Quotient Endomorphism Rings and Orders in Endomorphism Rings . . . 792 62
7. Automorphism Groups of Modules 793 64
8. Modules as Modules over Their Own Endomorphism Rings. 793 64
9. Equivalence and Duality 794 65
10. Lattices of Submodules of a Module 795 66
11. Properties of Individual Endomorphisms. 795 68
Literature Cited. 796 68

GEOMETRY OF ALGEBRAIC VARIETIES
I. V. Dolgachev and V. A. Iskovskikh
§1. Birational Geometry 803 78
§2. Riemann–Roch Theorem and Intersection Theory. 809 88
§3. Algebraic Cycles 812 93
§4. Geometry of Families of Varieties. 815 98
§5. Moduli of Algebraic Varieties. 819 105
§6. Periods of Integrals on Algebraic Varieties. 827 118
§7. Geometry of Algebraic Curves 831 124
§8. Geometry of Algebraic Surfaces 833 128
§9. Vector Bundles. 836 133
Literature Cited. 838 137

SURFACES OF NEGATIVE CURVATURE
É. G. Poznyak and E. V. Shikin
§1. Origin of Problems in the Theory of Surfaces of Negative Curvature (Survey of Work Up to 1950). 865 171
§2. Development of the Theory of Surfaces of Negative Curvature (Survey of Work from 1950 to 1960). 870 180
§3. Construction of the Theory of Surfaces of Negative Curvature. Papers on Saddle Surfaces (Survey of Work after 1960). 872 185
§4. Certain Unresolved Questions. 881 199
Literature Cited. 882 201

JOURNAL OF SOVIET MATHEMATICS
Volume 6, Numbers 1-6

Volume 6, Number 1 July, 1976

	Engl.	Russ.
The Existence of a Periodic Solution in a Tide Dynamics Problem – R. G. Gordeev	1	3
Operator Hamiltonians and Anticanonic Equations with Periodic Coefficients – V. I. Derguzov	5	9
The Application of the Theory of Interpolation Spaces for Estimating the Singular Numbers of Integral Operators – G. E. Karadzhov	22	37
The Continuity and Boundedness of Functions from Sobolev Spaces – V. G. Maz'ya	29	46
A Nonstationary Quasilinear System with a Small Parameter, Regularizing a System of Navier–Stokes Equations – A. P. Oskolov	51	78
A Solution of the Stationary Maxwell Equations for Cylindrical Waveguides with an Anisotropic Filling – A. S. Prutkovskii	58	87
The Computation of the Spectral Asymptotics for the Laplace Operator in Domains of Infinite Measure – G. V. Rozenblyum	64	95
Analogs of the Mityagin and Semenov Interpolation Theorems for Operators in Unnormed Symmetric Spaces – S. Yu. Rotfel'd	72	106
The Multiplier Problem in l_p Spaces for Orthogonal Series in Ultraspherical Polynomials – N. G. Tomin	78	114
A Class of Non-self-adjoint Singular Differential Operators with Discrete Spectrum – M. S. Finkel'shtein	87	127

Volume 6, Number 2 August, 1976

ARITHMETIC OF PROBABILITY LAWS
L. Z. Livshits, I. V. Ostrovskii, and G. P. Chistyakov

1. Introduction	99	5
2. Survey Articles and Books	99	5
3. Terminology and Notation	99	6
4. Indecomposable Laws	100	7
5. Description of the Class I_0	102	11
6. α-Decompositions	105	16
7. Decomposition into a Composition of Functions of Bounded Variation	106	18
8. Analytic and Entire Characteristic Functions	107	19
9. Ridge Functions	110	25
10. Arithmetic of Probability Laws on Groups	112	28
11. Delphic Semigroups	113	29
12. Miscellaneous	114	31
Literature Cited	114	33

CONTROLLED QUEUEING SYSTEMS
V. V. Rykov

Introduction	123	44
Chapter I. Theory of Controlled Stochastic Processes and Queueing System Control Problems	125	48

CONTENTS

(continued)

	Engl.	Russ.
1. Fundamental Concepts and Notation	126	48
2. Controlled Markov and Semi-Markov Processes: Theory and Methodology	129	54
3. Relationship of the Theory of Controlled Queueing Systems to Mathematical Programming Problems	143	76
4. Application of Methods of the Theory of Controlled Processes for the Determination of Optimal Control Strategies for Controlled Queueing Systems	147	83
Chapter II. Optimal Priority Assignment and Related Topics	158	102
1. Priority Systems with Waiting	158	103
2. Priority Systems with Losses; Closed Systems	161	109
3. Generalizations of the Priority Concept	165	115
4. Server Startup Priorities and Other Problems	171	128
5. Applications of Controlled Priority Systems	173	132
Literature Cited	175	135
CLASSES OF FORMAL GRAMMARS		
A. N. Maslov and É. D. Stotskii		
1. Fundamental Concepts	189	156
2. General Problems of the Theory of Grammars	190	157
3. Extensions of the Class of Contextless Languages	193	162
4. Lindenmayer Systems	196	167

CONTENTS

(continued)

Engl./Russ.

September, 1976 Volume 6, Number 3

Completion of the Multiplicative Group of p Extensions of an Irregular Local Field—Z. I. Borevich and Ali Jusef El Musa 211 6

Ring of Integers in an Extension of Prime Degree of a Local Field as a Galois Module—Z. I. Borevich and S. V. Vostokov 227 24

Some Homological Properties of Burnside Groups—B. B. Venkov 239 38

Cohomologies of Rings—N. Sh. Gadzhibalaev. 253 55

A Class of Finite Projective Planes—N. D. Gogin 259 61

Extensions without Simple Ramification of a Local Field—I. G. Zel'venskii 295 102

Problem of Immersion of Local Fields with a Non-Abelian Kernel—B. B. Lur'e 298 106

Certain Finite Groups—A. I. Skopin 307 115

Hopf Algebras with Involution over Noncommutative Rings and Their Homologies. I—A. V. Yakovlev 328 140

Volume 6, Number 4 October, 1976

Relationship between the Classical and Constructive Developments of Mathematical Analysis—M. G. Gel'fond 347 5

Increase of the Complexity of Functions by an Application of Multiple Recursion—E. Ya. Dantsin. 353 12

Relationship between Sheaf Spaces and Numbered Sets with the C_2^* Property—Yu. L. Ershov. 358 18

Properties of the Solutions of Equations in a Free Semigroup—N. K. Kosovskii 361 21

Recognition of Invariant Properties of Algorithms—N. K. Kosovskii 368 29

Recognition of a Self-Crossing of a Plane Trajectory by a Kolmogorov Algorithm—M. V. Kubinets 374 35

Metamathematical Interpretation of the Fan Theorem—V. A. Lifshits 383 45

Noncompact Closed Ball in a Constructive Compact Metric Space—V. A. Lifshits and V. P. Chernov 390 53

Deduction Search in Calculi of General Type—S. Yu. Maslov 395 59

Probabilistic Canonical Calculi—S. Yu. Maslov and E. D. Rusakov 401 66

Arithmetical Representations of Enumerable Sets with a Small Number of Quantifiers—Yu. V. Matiyasevich 410 77

Derivability of Admissible Rules—G. E. Mints 417 85

CONTENTS

(continued)

	Engl.	Russ.
Cut-Elimination Theorem for Relevant Logics—G. E. Mints	422	90
A Specialization of the Form of Deductions in Gentzen Calculi and Its Applications—V. P. Orevkov	429	98
Properties of Graphs of Functions in the Grzegorczyk Hierarchy —S. V. Pakhomov	434	105
Extension of the Inverse Method to Axiomatic Theories with Equality —A. Yu. Plyushkevichene	437	108
Equational Calculus for Primitive Recursive Rational-Valued Functions —M. Kh. Fakhmi	444	116
Families of Recursive Predicates of Measure Zero—R. I. Freidzon	449	121
Topological Variants of the Continuity Theorem for Mappings and Related Theorems—V. P. Chernov	456	129
Constructive Operators of Finite Types—V. P. Chernov	465	140
Classification of Spaces of Operators of Finite Types—V. P. Chernov	471	148

November, 1976 Volume 6, Number 5

	Engl.	Russ.
Uniform Asymptotic Expansions of Functions Associated with an Oblate Spheroid — V. M. Babich and N. S. Grigor'eva	475	6
Rigorous Justification of the Shortwave Approximation in the Three-Dimensional Case — V. M. Babich	488	23
Boundaries of Applicability of the Asymptotic Expression for a Wave Propagating along a Concave Surface — V. S. Buldyrev and A. I. Lanin	510	52
High-Frequency Asymptotic Representation of a Wave Field Concentrated near the Boundary of an Elastic Medium — P. V. Krauklis and Tsepelev	524	72
Surface Waves Confined to a Thin Low-Velocity Layer — I. A. Molotkov and S. S. Sardarov	539	93
Dispersion Relations for Layered Media with Nonrigid Contact at Certain Interfaces — L. A. Molotkov	547	103
Interference Waves in a Free Inhomogeneous Elastic Layer — L. A. Molotkov	558	117
Rigorous Justification of the Shortwave Asymptotic Theory of Diffraction in the Shadow Zone — V. B. Filippov	577	142

CONTENTS

(continued)

Engl./Russ.

Volume 6, Number 6 December, 1976

A Proof of Minkowski's Conjecture on the Product of n Linear Inhomogeneous Forms in n Variables for $n \leq 5$ – B. F. Skubenko 627 6

The Theory of Hermite-Minkowski Reduction of Positive Definite Quadratic Forms – S. S. Ryshkov 651 37

The Perfect Form A_n^k: the Existence of Lattices with a Nonfundamental Division Simplex, and the Existence of Perfect Forms Which Are Not Minkowski-Reducible to Forms Having Identical Diagonal Coefficients – S. S. Ryshkov 672 65

The Hermite-Minkowski Domain of Reduction of Positive Definite Quadratic Forms in Six Variables – P. P. Tammela 677 72

Two Remarks on Bravais Manifolds – P. P. Tammela 689 90

A Remark on Star Sets – A. V. Malyshev 692 94

Modell's Method of Reciprocal Lattices in the Geometry of Numbers – A. V. Malyshev 694 97

Sums of Squares of Square-Free Integers – E. V. Podsypanin 707 116
